

Anicet BARRIOS | AI BUILDER . ROBOTICS & EMBEDDED SYSTEMS

24 YEARS OLD
FRANCO-BRITISH

EMAIL : ANICET.RESUME@BARRIOS.ME
WECHAT : ANEYSAIT

Applied AI and robotics engineer — from CV pipelines to hardware prototypes. Proven in constrained, high-tempo environments across France, the U.S., and China.

EDUCATIONAL BACKGROUND

Shanghai University (SHU) - China MSc in Electronic Information - 2024-Present

Smart systems, control, industry 4.0

Projects :

- Bi-modal drone/car robot built in a 2-week intensive prototyping bootcamp Shenzhen — hardware design, embedded programming, and autonomous control prototyped under resource and time constraints
- Digital twin in Unity of a small manufacturing set with a robotic arm, conveyor and workstation

University of Technology of Compiègne (UTC) France - Mechanical engineering major - specialization in mechatronics, actuators, robotics and systems - 2022-2025

Electronics, dynamics, embedded systems

Projects :

- 4-wheel mobile robot - autonomous and RC
- MVP of a visual software for competitor intelligence on rival firms

About me

Scientific pre-university program at Lycée Pothier - France - 2019-2022

Maths, physics and engineering sciences

Research projects :

- Design, manufacturing and control of a 3-axis robotic arm
- Structural & thermal study of 3D printed house wall infills

LANGUAGE SKILLS

- English: Native
- French: Native
- Chinese: Conversational

HARD SKILLS

- **AI / ML**
 - YOLOv8, Computer Vision, ML Pipelines, Dataset Engineering
- **Programming**
 - Python, C, C++, MATLAB, SQL
- **Embedded / Prototyping**
 - Arduino, Raspberry Pi, 3D Printing, Laser Cutting, Digital Fabrication
- **Robotics / Automation**
 - PLC (TIA Portal), Robot Programming, Industrial Automation, Embedded Systems
- **Simulation / CAD**
 - Unity, Tecnomatix Process Simulate, CAD/CAM, Manufacturing Processes

INTERESTS

- Sports: Parkour, CrossFit, Trekking
- Technical: Robotics, 3D Printing, FPV Drones
- International: U.S. (2009-2011, 2023), China (2024-2026)

PROFESSIONAL AND VOLUNTEER EXPERIENCE

R&D AI & Computer Vision Intern

Dongguan University of Technology (DGUT), SSHMC Lab - **China** - 6 months (2025)

- Co-authored a peer-reviewed paper in Automation in Construction (Q1, IF 11.5)
- First-authored a 3D reconstruction & depth-estimation review (AIAC 2025 / IEEE Xplore)
- Built a reproducible end-to-end YOLOv8 pipeline for multi-class concrete crack segmentation
- Improved dataset reliability through quality control and geometry-based label standardization
- Replaced a faulty preprocessing stage with a controlled augmentation workflow for reliable experiments

R&D AI & Robotics Intern

University of South Carolina (USC), McNair Aerospace Center - **USA** - 6 months (2023-2024)

- Developed a proof-of-concept simulation of a waste management process integrating AMRs for an industry partner
- Built a new automotive assembly scenario integrating CAD modeling, camera systems, digital twin simulation, robot programming, and PLC coding
- Delivered CAD modeling support across multiple engineering projects

Vice-president, robotics club | Project Manager, FabLab

UTC Student Innovation Leadership - **France** - 2022-2024

- Led robotics and digital fabrication initiatives, supervising a 15-member team and supporting 10+ projects
- Directed the design, build, programming, and testing of an autonomous robot for the French Robotics Cup
- Managed project planning, prototyping, and fabrication resources in the FabLab
